

graphsatsat::LocReachProperty  
::operator()

graphsatsat::FischerMutual  
::operator()

graphsatsat::StateManager  
::GetComponentNum

```
graph LR; A["graphsatsat::LocReachProperty::operator()"] --> C["graphsatsat::StateManager::GetComponentNum"]; B["graphsatsat::FischerMutual::operator()"] --> C;
```

The diagram illustrates two function calls on the left pointing to a single function on the right. The first call, 'graphsatsat::LocReachProperty::operator()', is in a white box. The second call, 'graphsatsat::FischerMutual::operator()', is in a white box below the first. Both have blue arrows pointing to a grey box on the right containing 'graphsatsat::StateManager::GetComponentNum'.
